(54) Title: NON-EXPERT CONTROL OF AN MR SYSTEM

(57) Abstract: The invention relates to magnetic resonance imaging and offers a way to provide even the non expert user with full control of a magnetic resonance imager. The invention achieves this by offering a user interface which is arranged to assign values to at least one attribute used to influence the visual presentation of an acquired magnetic resonance image and in which the values of the at least one attribute are arranged to be chosen from information indicating the effects of their assignment on the content of the visually presented acquired magnetic resonance image. Therefore, commands can be given in terms of the result to be achieved (e.g. "rotate the slice by 30° with respect to the z-axis"). Voice control may be performed.
